

18.8 Climate Change and War

- (1) What can you infer from these two maps.
- (2) In your opinion, how can we explain this development?

This map shows regions of the world most immediately affected by climate change as the world warms and they are subject to extended droughts. **Source:** <https://www.slideshare.net/ILRI/role-of-climate-change-in-epidemiology-of-infectious-diseases>

This map of current war zones is maintained by IRIN, formerly the United Nations Integrated Regional Information Networks. Red dots represent ongoing conflicts as of February 2019.
